

**GinGira®**  
**ZINC PYRITHIONE**  
**SPRAY**

**SAY GOOD BYE TO THE IRRITATED, ITCHING AND SCALY SKIN**

**Description**

GinGira Zinc Pyrithione Spray is a medical cosmetic developed especially for irritated, dry, itching and scaly skin. The combination of zinc pyrithione with hydrating and emollient components in a form of spray makes the preparation unique.

**Composition**

GinGira Zinc Pyrithione Spray contains the following mutually potentiating ingredients:

- Active ingredient - zinc pyrithione
- Hydrating components – purified water, glycerin
- Emollients – coco-caprylate/caprate, cocoglycerides, cetearyl alcohol

It does not contain irritating preservatives as parabenes and aromatizers and is colorless.

**Action/Properties**

*The active ingredient is zinc pyrithione* - effective and clinically proven it is approved by the European Union. It possesses anti-fungal and anti bacterial action. It has anti-inflammatory, anti-proliferating (regulates the proliferation of the skin cells) and immune modulating effect.

*The additional ingredients* restore the impaired water-lipid skin membrane and are two types – hydrating and emollients. Hydrating components act on the skin as a natural moisturizing factor. Emollients prevent water loss, soften, cool and relieve.

Both components have complementary effect and potentiate the effect of the active ingredient.

*Pharmaceutical form* is a special emulsion in the form of pump spray – a unique high technological pharmaceutical form. Easy to apply and hygienic – no need to touch the irritated skin.

**Usage/Indication**

In cases of skin irritations and inflammations as: dandruff, seborrheic dermatitis, fungal and bacterial infections, psoriasis, atopic dermatitis, eczema, neurodermatitis, skin allergies, insect bite and other skin diseases. Very suitable in cases of dry, scaly skin and chapped heels,

diaper rash in babies and intertrigo. GinGira Zinc Pyrithione is perfect in skin irritations and folliculitis caused by epilation or shaving and other cosmetic procedures, in dryness as a result of frequent hand washing, in skin and scalp itching. It has a favorable effect in patients with rosacea, acne and vitiligo.

### **Dosage/Administration**

It can be applied up to 6 times daily on the affected skin. Shake well the vial before use. Spray evenly on the affected area on a thin layer. Rub if needed. Suitable for children and adults.

### **Safety**

For external use only. Avoid contact with eyes. Do not use on burns and open wounds.

### **Tips to obtain a maximal effect**

Use the product in cases of *dandruff and seborrheic dermatitis* after hair and body washing. Rub in the hairs roots. For obtaining a maximal effect leave it to act during night. You may rinse in the morning. Zinc pyrithione has the most powerful anti fungal effect against *Malazessia globosa*. It stops its proliferation and clears the skin.

For maintaining moist and elastic skin in *eczema*, use the preparation as many times as it is necessary in enough quantities. Keep on applying every day even after the irritation disappears. This will prevent the skin to become dry, will decrease the itching and the eczema aggravation. The anti fungal and anti bacterial properties maximally increase the skin protection and prevent it from inflammation and recurrence. The main purpose of the preparation is prevention of eczema aggravation. In cases of aggravation the product is used as an adjuvant therapy. In eczema it may be used as a substitute of soap which dehydrates the skin.

In *psoriasis* use the preparation together with the main therapy. For example, if you apply Daivobet at night, apply regularly GinGira Zinc Pyrithione Spray at daytime.

In *diaper rash* in babies the product is suitable for its cooling and relieving effect, its anti fungal and anti-inflammatory action. Wash and dry the inflamed area. Spray with GinGira Zinc Pyrithione without touching with fingers. Change regularly the diapers.

In *dry and chapped heels* soak the feet in cool water and after that rub thoroughly. Dry well your feet and spray with GinGira Zinc Pyrithione. In regular use of the preparation the heels are always smooth and soft.

## **Benefits**

- Clinically proven solution
- Contains effective ingredients
- Easy application
- Fast absorbing
- Odorless, colorless, non-oily
- Available in Pump spray bottles
